Lieutenant Governor John Garamendi Encourages Careers in Science and Technology to Future California Workforce

Lt. Governor Garamendi Encourages Members of Einstein's Daughters, an All-Girls High School Robotics Team from San Diego, to Pursue Careers in Science and Technology

Lieutenant Governor John Garamendi, a UC Regent and chairman of the Commission for Economic Development, today addressed high school and college students on where to find jobs in the fields of science, engineering and technology at the San Diego Science Festival held at the University of California San Diego.

“You look at the incredible industries created here in San Diego. The biotechnology, biopharmaceutical and electronics industries came directly from this university and the investments made by previous generations building the facilities, faculty, scientists and researchers here today. If you want to build a great economy, you build it on science and your build it on an investment in the educational system. That’s the only way to do it,” Lieutenant Governor John Garamendi said.
